# Transportation Software RFI

This is a *tool to speed up* the process of searching for a new TMS, by enabling the selection team to use a concise set of TMS questions.

The **Advanced RFI** has over 900 detailed questions about TMS functionality and some company questions. E-mail the RFI to the software vendor, who answers the *validated* questions for it's current production release. A coloring technique assists the selection team to *quickly see where the product is strong & weak*. On each question, the software vendors may also make notes in a *separate* area for future releases or any comments needing to be made.

Since responses are in a computer format, it makes developing the cost summary and functional score card, to be much quicker.

- This RFI has been utilized by multiple companies already. Both the company looking for the software and the software vendors love the format, the clarity, and the ease of use.
- "Excellent ... most professional RFI."  
Lori from Uniteq
- "The format was most useful. It was organized in a manner that made sense. The time I would have had to spend to put a spreadsheet together as detailed as this would have delayed the project. The cost of the software is very reasonable, well worth the money."  
Doug Crossley from Electronics Boutique
- "Questions are well-thought out and have a pop-up window explaining what is being asked for in greater detail."  
Phil Obal  
President of IDII.
- "I used to develop RFI's when I was a consultant and I have to say that the RFI work you have done is by far and away the best in the business."  
Marc Wulfrat at Tecsys
- The RFI is delivered as a **unlocked** Microsoft Excel spreadsheet. *One may add new questions* for company specific requirements. In addition, one may drop or modify any questions that do not pertain to your operations.
